## Common Rail Injectors (CRI) – Diesel Top Sellers

### Advanced Technology for Diesel Engines

Named after the shared high-pressure reservoir that supplies cylinders with fuel, the Common Rail Injection (CRI) system is an advanced technology for diesel engines. For conventional diesel injection systems, fuel pressure needs to be generated for each individual injector. For Common Rail systems, pressure generation and injection are separate, meaning the fuel is constantly available at the required pressure for injection.

To ensure continued performance, all GP Sorensen® Diesel CRI Injectors are the product of an exhaustive remanufacturing process at our TS16949, ISO9001, and ISO14001 certified facility.
